The dimentions of the original arm was 12.75 long,1inch wide,a quarter thick. The big hole in the centre makes it dangerously weak.Make a new one using TWO inch wide strip.Taper the ends to 1 inch. Throw the original arm in the bin ,before it kills you!

Geoff,

Thanks for the advice and the dimensions!

Regards,
Marshall walker

Geoff,

It's not the brake torque arm thats the killer - it's the heart attack brought on by the kicking/pushing to get the bike started to begin with!!!

Cheers!

Stan.
