Can anyone tell me the easiest way of fitting a new spring?
I have tried various ways of compressing it but dont want to go any further for risk of damageing the spring.

once again Gill,thanks very much for sending it!

Dan,

Place the spring onto the centrepin and with a pair of pliers (grip firmly) wind the spring up and when wound up set the outer end on the anchor pin .

Replace the cover an hey presto !

Cheers Peter.
