---

Is there any "timing" in the pump?, say, should the stroke fall when the crank is in a certain position? or doesn't it matter, as long as it delivers oil

1956 Birmingham Scott, frame no. S 1060

Hi Jan, there is no "timing" other than making sure when replacing the pump unit be careful to see that the slot in the disc engages with the boss in the crankpin screw positively. To quote the "Book of the Scott".
